

BALANCE TRAINING

An interaction system inside the fitness room

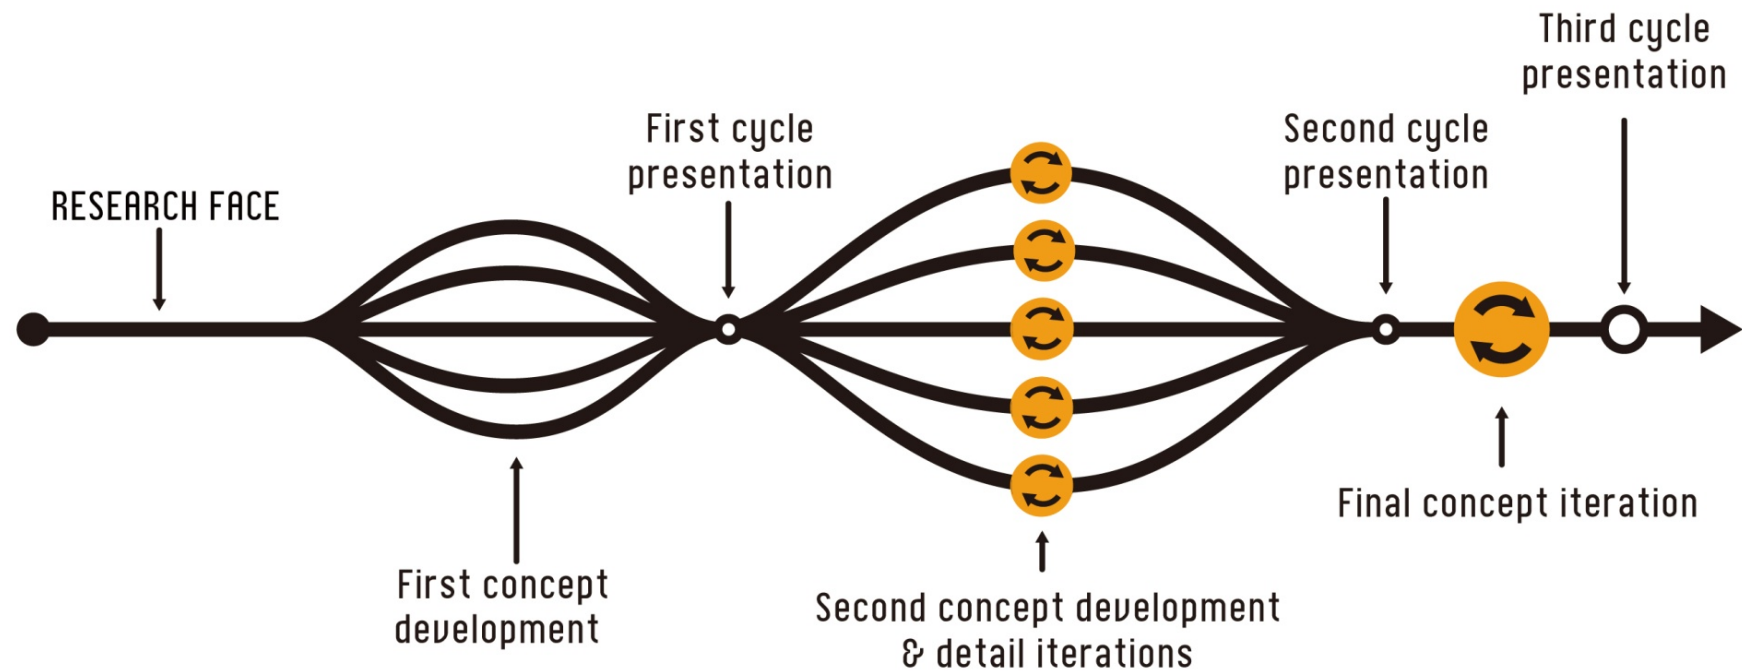

Design Goal

Help people training in the gym to improve themselves in a most balance way without getting injured.

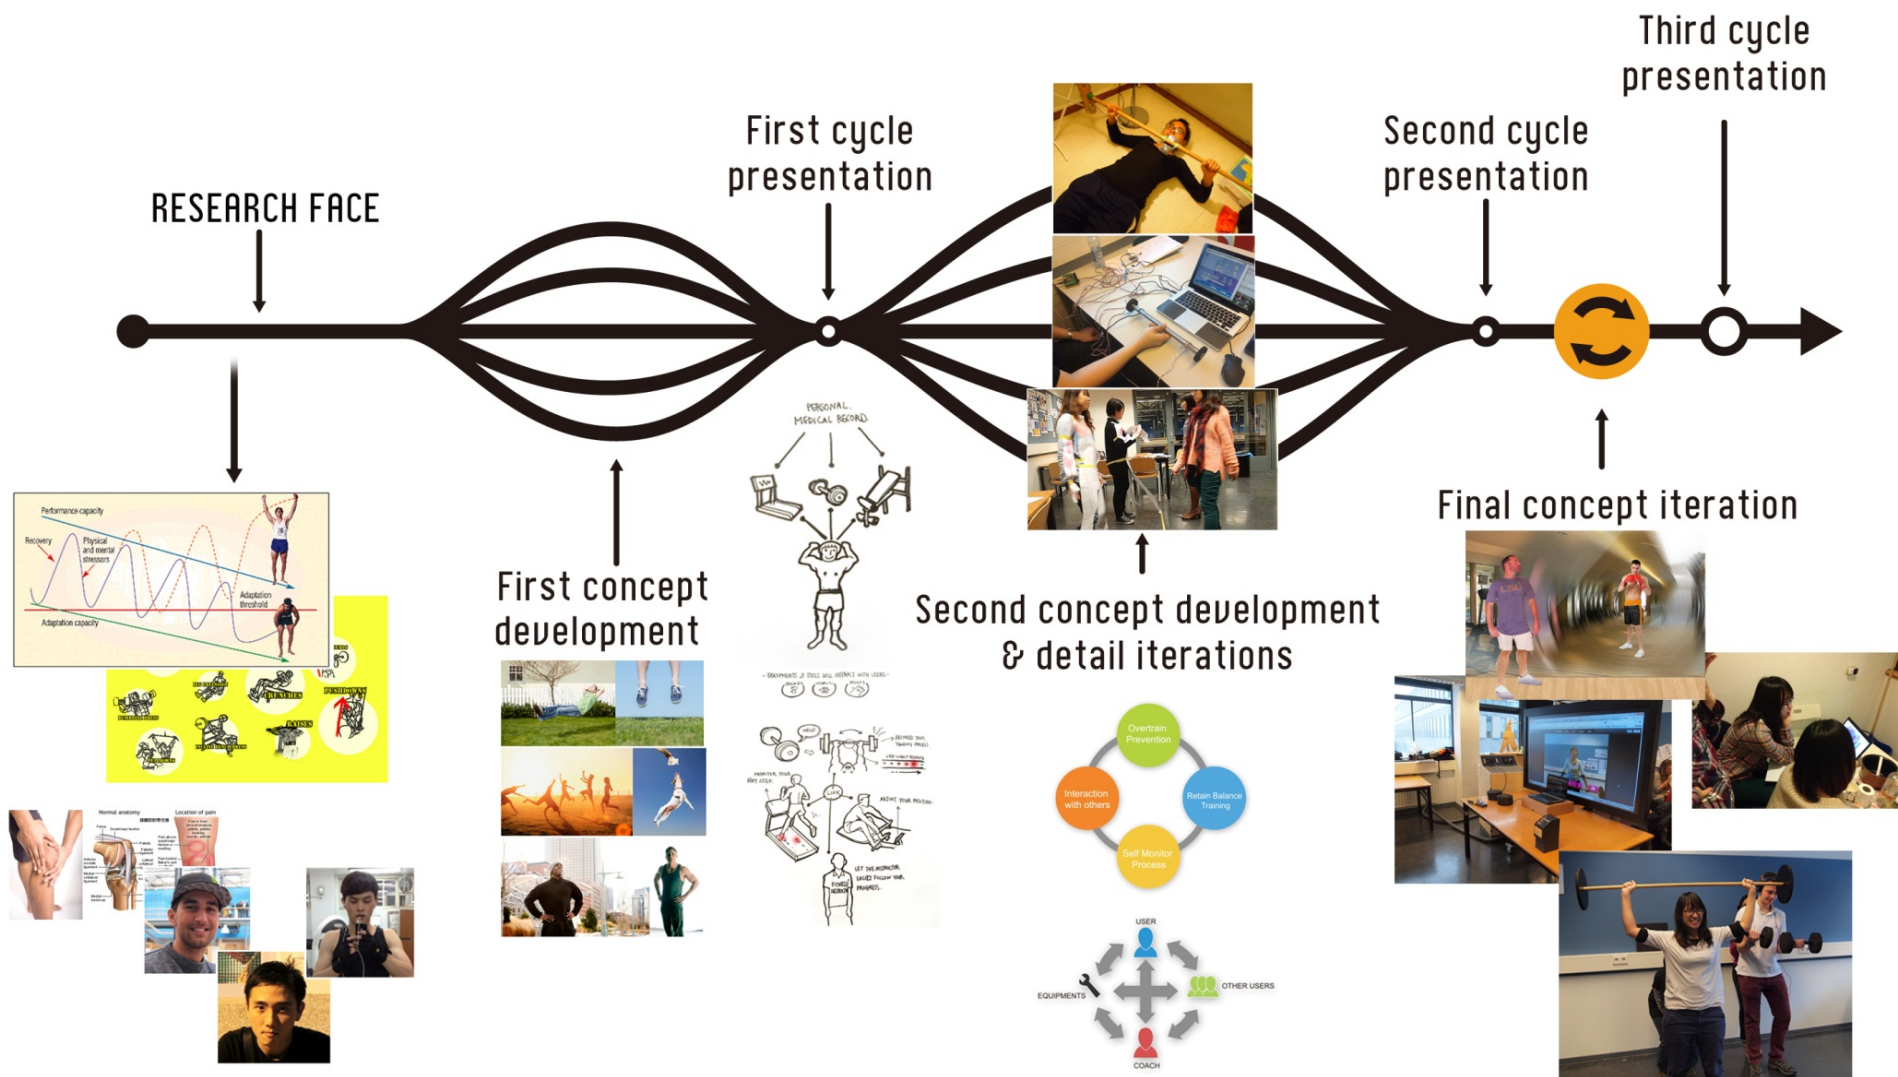

Interaction n Vision

The interaction between users and environment and other users in the gym will be **playful**, **secure**, and **confident**. Just like a personal coach stand aside to help you in the whole process.

DESIGN PROCESS

ID CARD

INTERACTION MIRROR

DETAIL BALANCE ADJUSTMENT

QUANTITY REMINDER

System Structure

SCENARIO GOING TO FITNESS ROOM TODAY

1

2

4

While training, the mirror will start monitoring the training progress.

Before using every equipment, use ID card to obtain training record.

3

5

The reflection on the mirror will show detail information to help user adjust their balance.

6

If the user over trained themselves there will be a storm created in the mirror blocking the reflection. And if the user keep on going, the blur will grow bigger and effect other user's reflection.

7

Final Prototype Set Up

Balance Graph Test

Conclusion

After the prototyping I interview several people about the system. And receive positive feed back that this system really help them to better manage their training. And they also think that the system is like a coach to remind them when they are doing wrong.

Thank you
