# LIVING INDEPENDENTLY - DEMENTIA

TIM provides a **cozy** dinner experience between a person with dementia and his/ her children. The heat of the candles let the propellers and **old photos** rotate and stimulate demented elderly to recognize moments from the past. The photos are a good trigger to start a conversation and let the family feel **connected** with each other.

**Music** is included as well. A Bluetooth speaker is placed in the bottom of the concept. Before the dinner starts, the children are able to create a personal playlist with their smartphone. So during the dinner they can listen to the music. The music stimulates reminisce and prevents awkward silence.

*"I want to create a positive and relaxed dinner experience between a person with dementia and his or her children"*
