

BLEND

an interactive game to **STIMULATE THE INTERACTION** between a child with down syndrome and the other children within **INCLUSIVE EDUCATION**

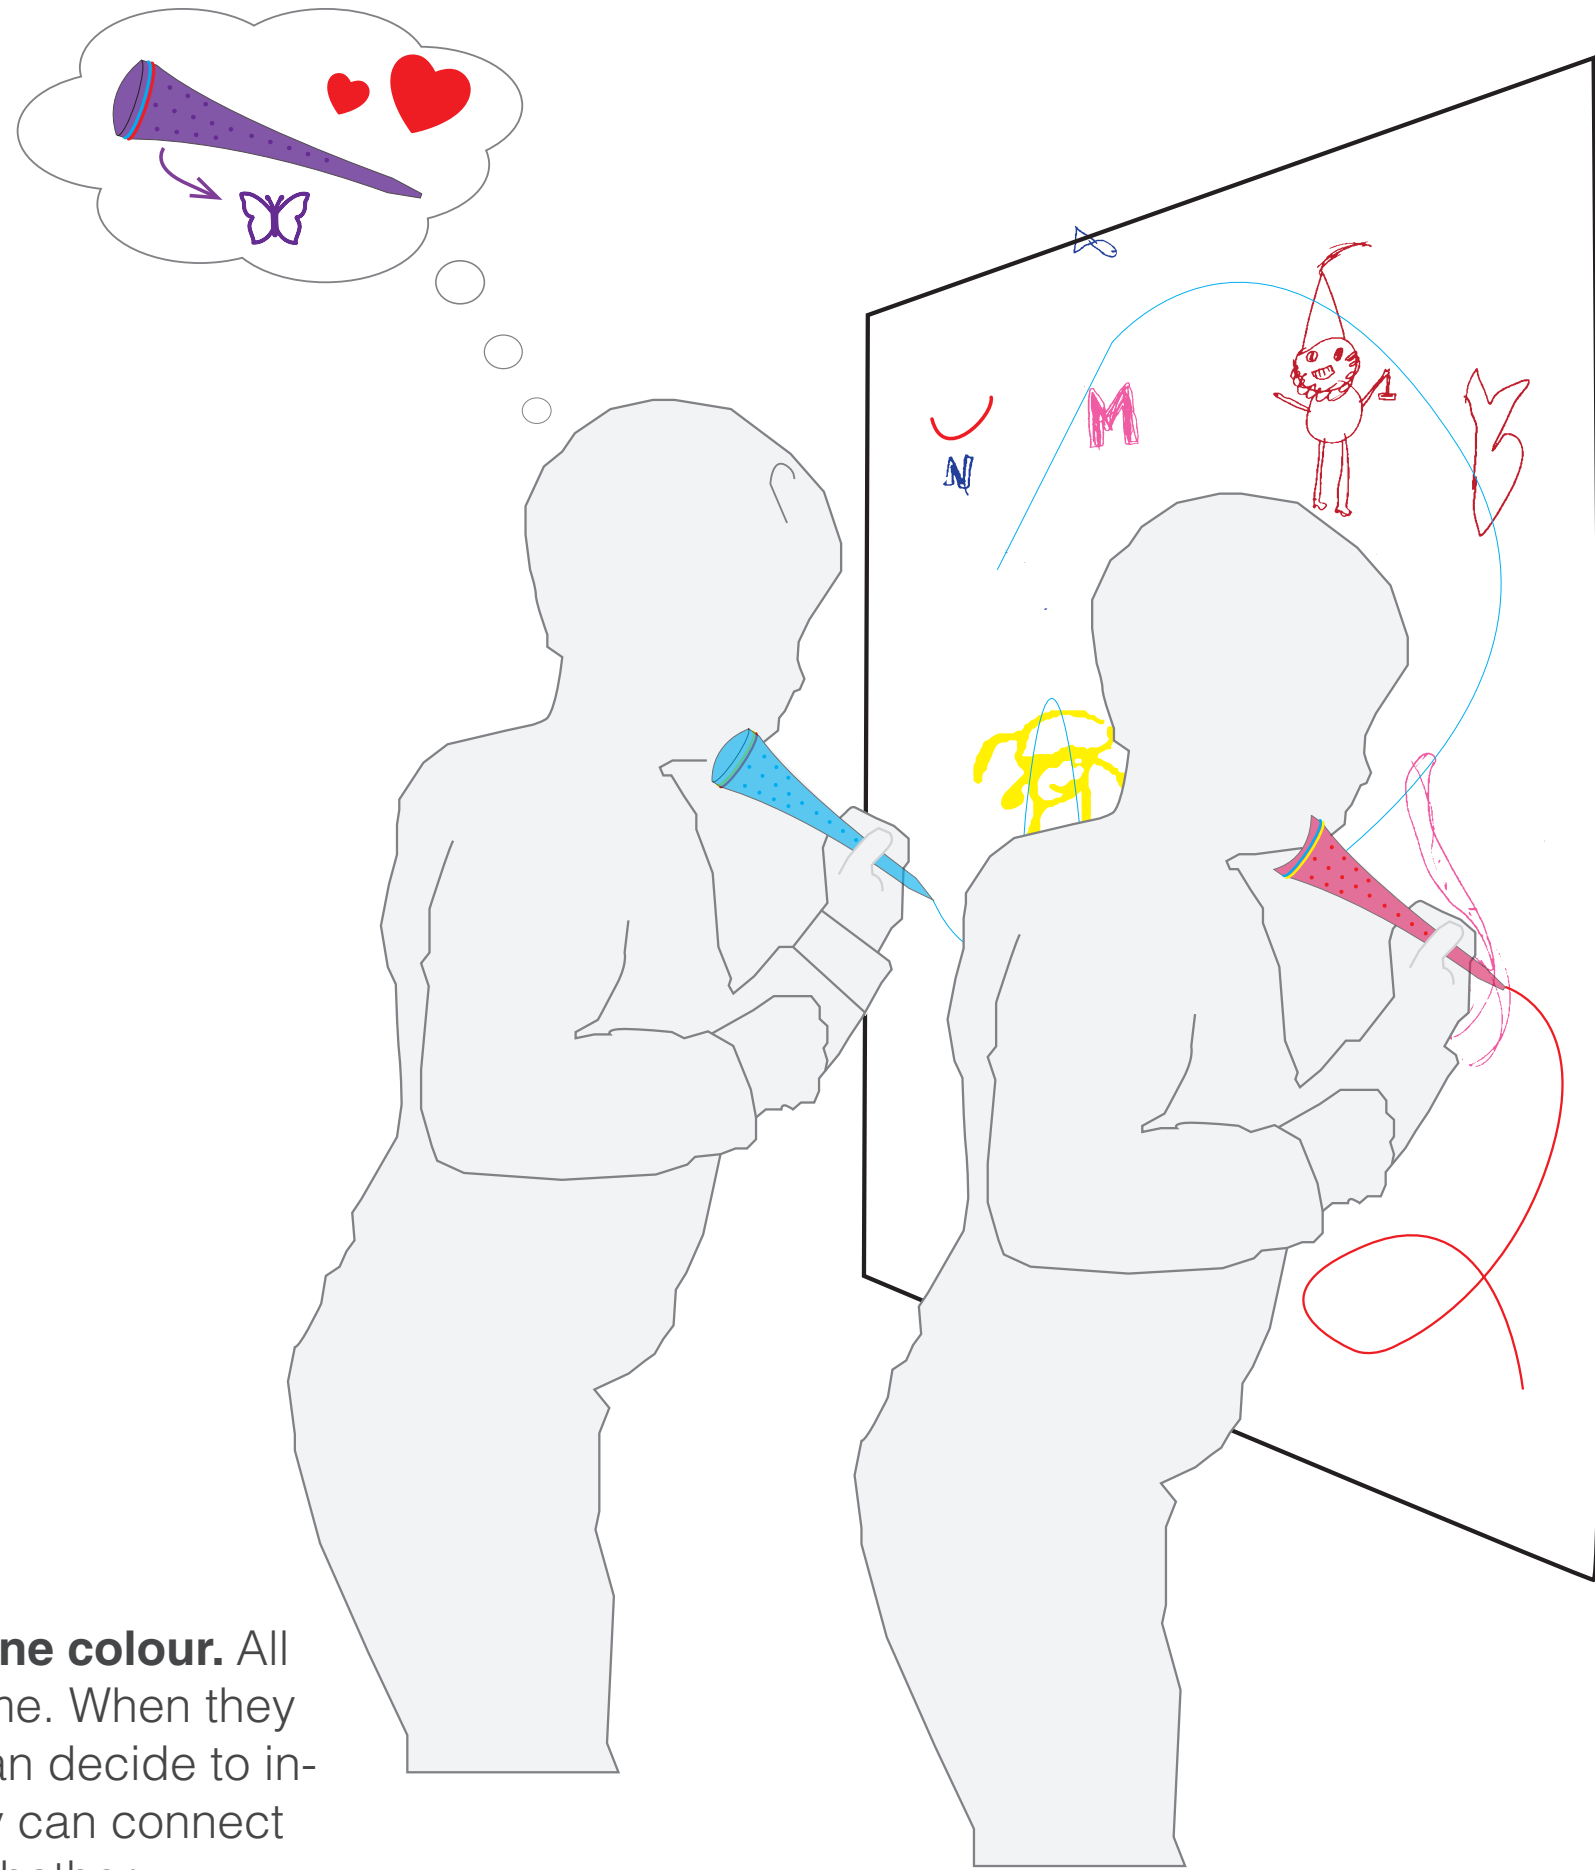

01

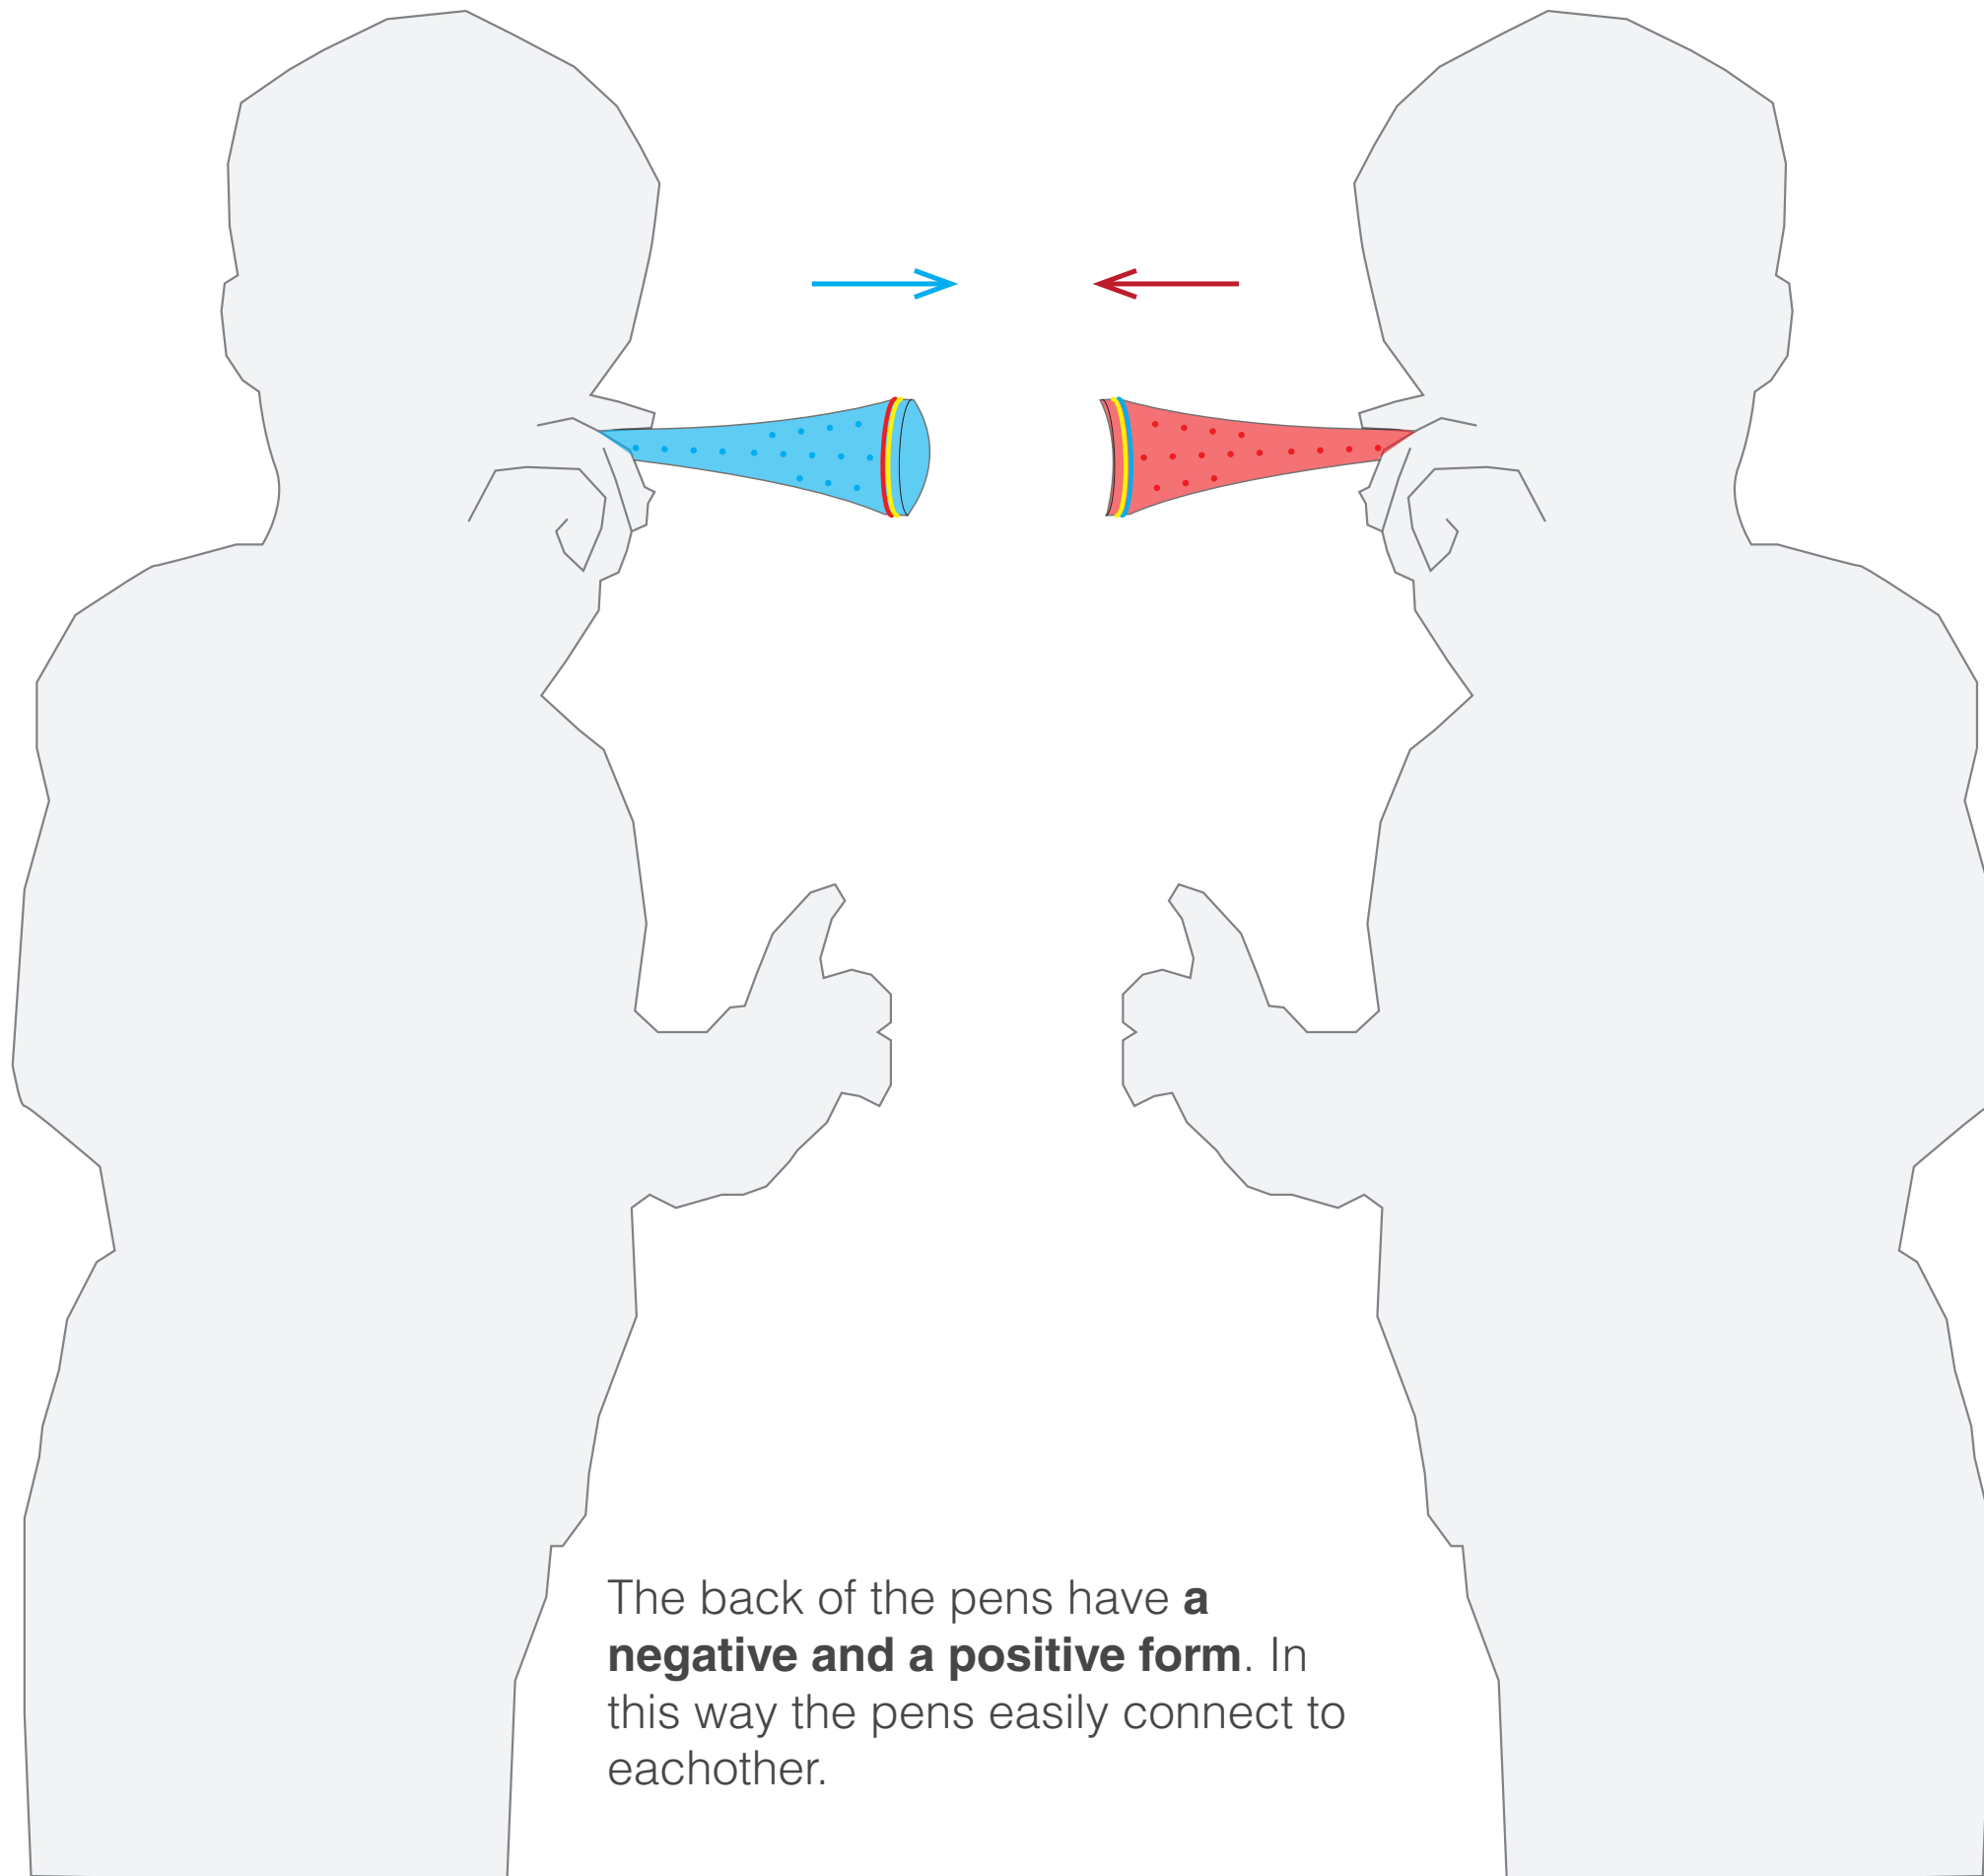

BLEND is an extension to the smart digital boards in the form of a coloured pen. The game can be played with four children at a time. Each child will get a colour.

02

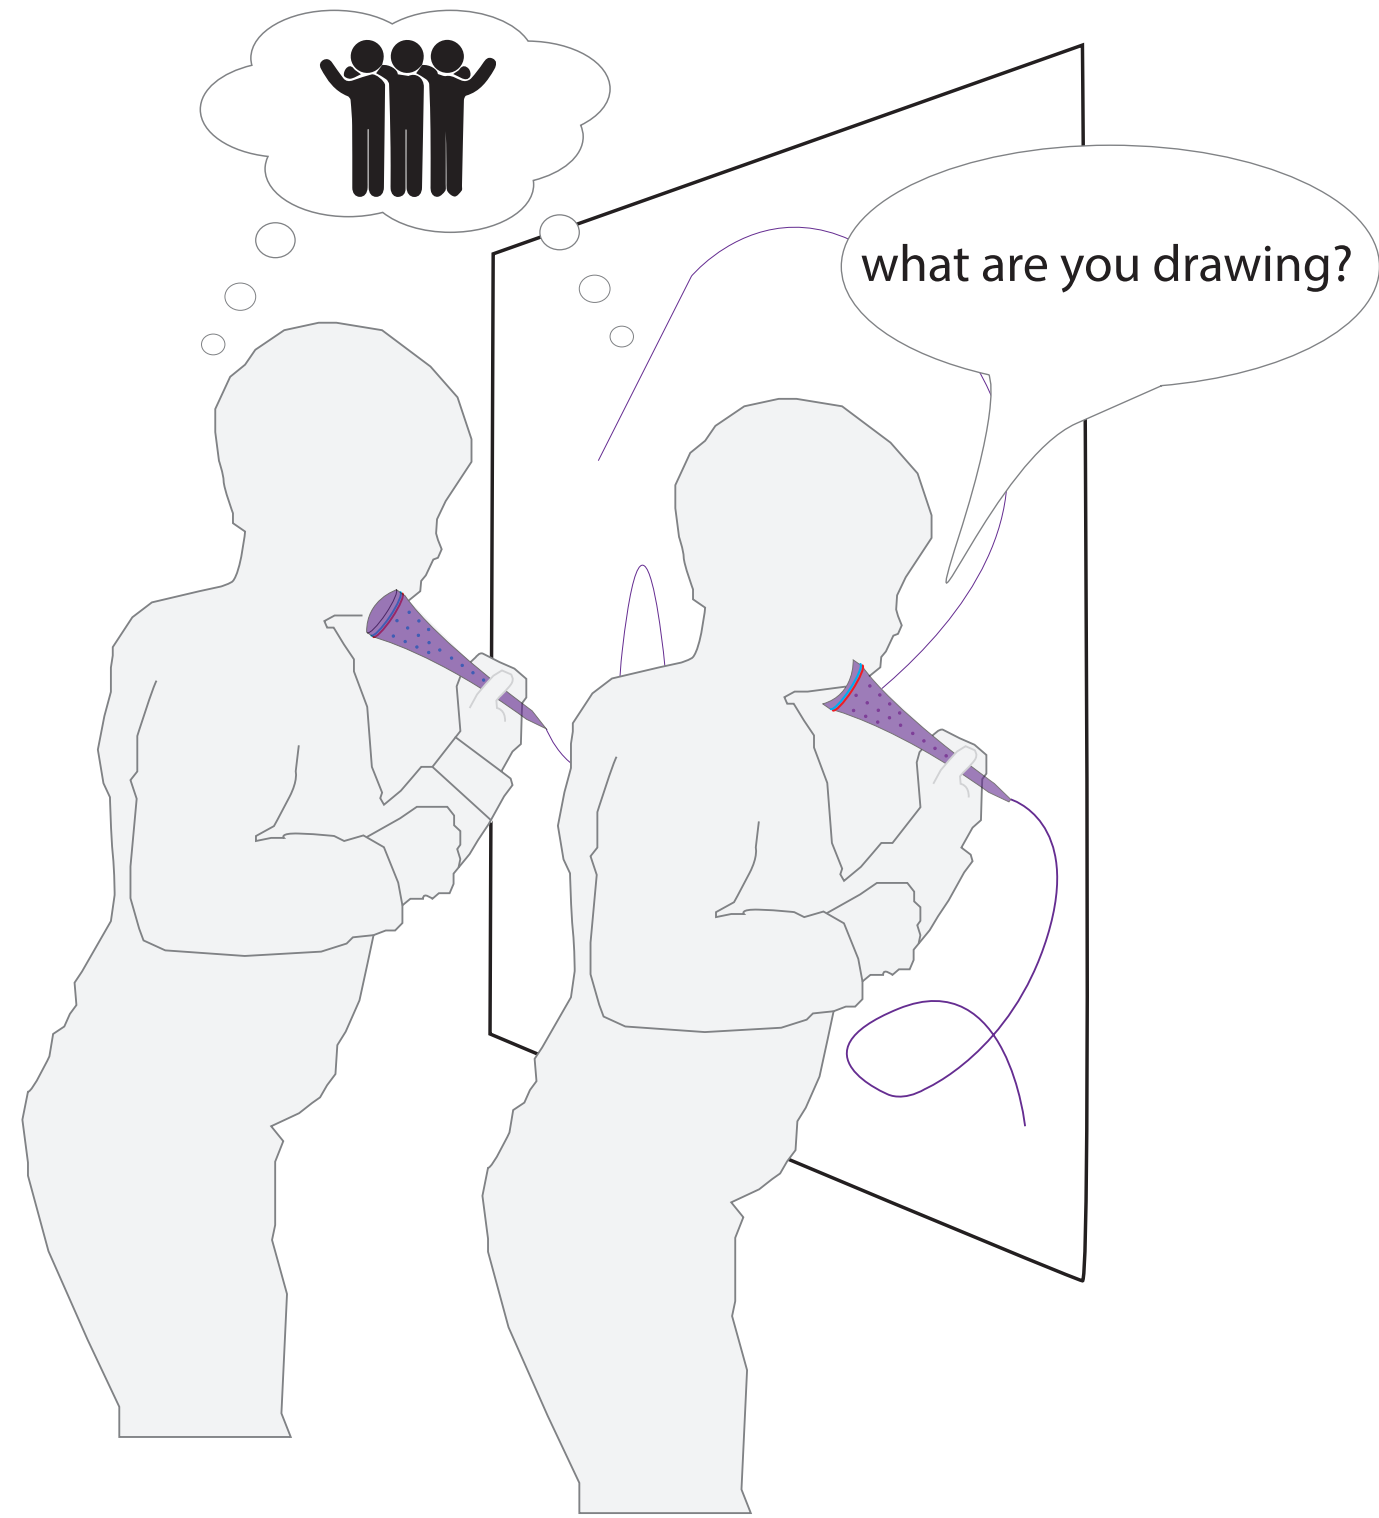

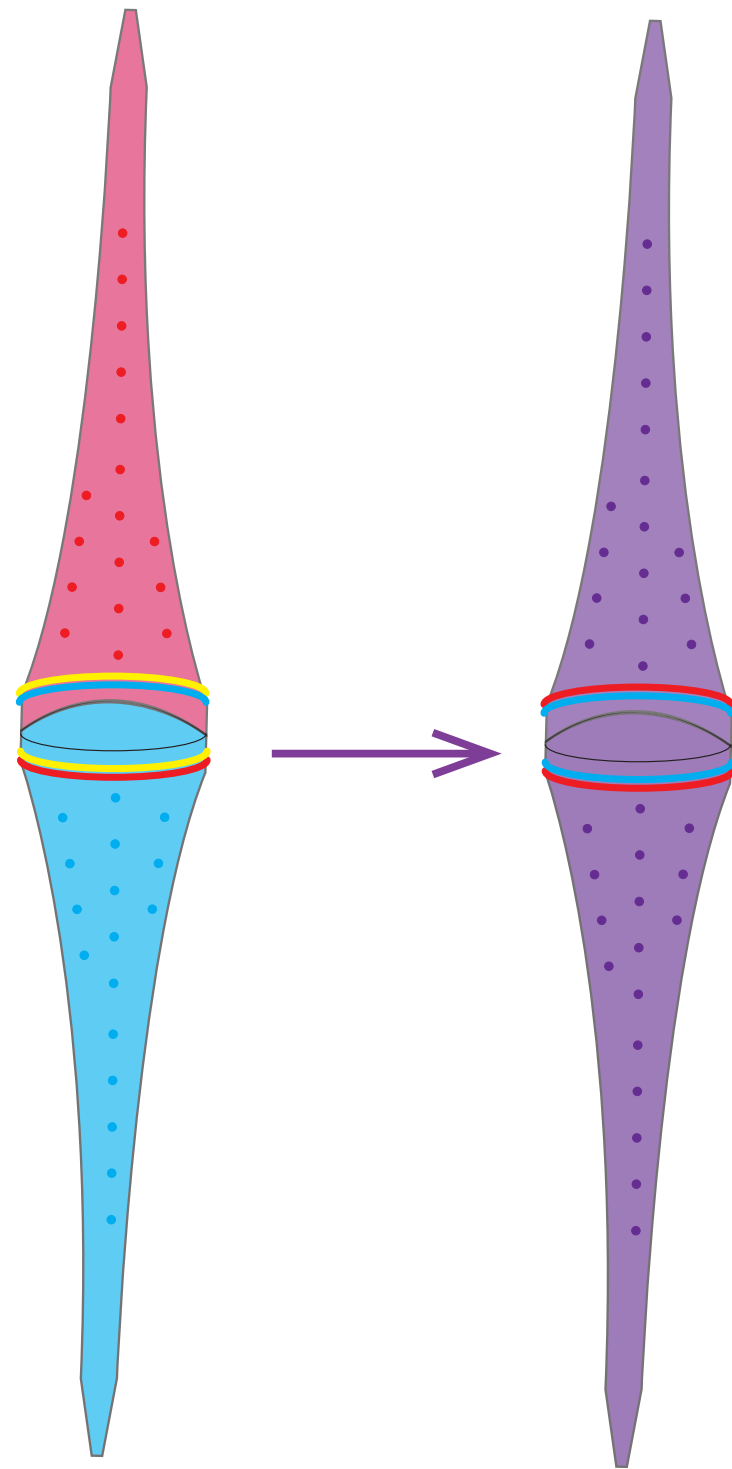

The children will **only get one colour**. All children are treated the same. When they want another colour they can decide to interchange the pens, or they can connect the back of the pens to each other.

03

The back of the pens have a **negative and a positive form**. In this way the pens easily connect to each other.

04

When the pens are connected to each other, the colours of the pens will mix up. For example red and blue becomes purple. Red and yellow becomes orange. Literally connecting the children to each other will stimulate the interaction between these children.

BLEND

a product for children with down syndrome and their friends that instead of emphasizing the disability it **EMPHASIZES THE EQUALITY.**
