

Greener Cleaner

Antonia Fedlmeier

My design goal is to make people feel assured when making and using home-made cleaning products

Test the cleaner yourself!

GREENER CLEANER is a five-piece kit that allows users to make their own sustainable all-purpose surface cleaner. It consists of a container to make the scented vinegar and a spray bottle to mix and use the vinegar cleaner, both coated with instructions. It also comes with a pamphlet made out of litmus paper that contains information to stimulate a switch in mindset in addition to allowing the user to test whether their concoction works. The appearance and inclusion of a wooden stand encourage users to display the cleaning product in their homes in the hopes that it creates discussion, to spread the word about sustainable cleaning habits.
